### **STOCK CHART**

## **COMPANY DESCRIPTION**

TransGlobe Energy Corporation ("Company") ("TGA") is an independent oil and gas exploration and production company, with current operations in Alberta, Canada, and the Arab Republic of Egypt. The Company has operated in Egypt since 2004 and holds interests in production sharing concessions in the Eastern Desert and the Western Desert regions. TransGlobe operated in Canada from 1999 to 2008 and re-entered Canada in December 2016. The Company's Canadian holdings include production and working interests in Cardium light oil and Mannville liquid-rich gas assets in the Harmattan area, located in west central Alberta. TransGlobe Energy is headquartered in Calgary, Alberta, and has approximately 70 employees.

## **SUMMARY**

TransGlobe has been in the international oil and gas industry for over 20 years and has drilled more than 400 gross wells in varying geological formations, political climates and economic environments. Through the execution of a disciplined business plan involving cost-cutting measures, a strategic acquisition, and key contracts with the Egyptian government and third-party marketers, TGA's management has steered the Company through a difficult period involving low oil prices and political turmoil, and, as a result, TransGlobe has recently returned to profitability.

- TransGlobe had an average production base of roughly 14,439 Boepd in 2018 and recently reported ~15.9 MBoepd for Q119 and ~17.0 MBoepd during the month of May. TGA has a number of development projects in Canada and Egypt, along with some potentially high-impact exploration opportunities in Egypt. The most recent 2019 capital budget includes a total of ~\$34.1M, with ~\$24.1M allocated to Egypt and ~\$10.0M to Canada.
- As Egypt has regained political and economic stability in recent years, TransGlobe's original 2019 budget plans included completion of 4 development wells in the Eastern Desert, in addition to multiple recompletions and well optimizations, as well as 2 exploration wells (but TGA disclosed 2 wells bumped up to 2018). In the Western Desert, the focus is on appraisal and development of the SG 6X light oil discovery in South Ghazalat.
- At year-end 2016, the Company acquired some producing high-quality light oil and liquids-rich gas plays in west central Alberta, Canada. The acquisition was designed to diversify TGA geographically as well as expand operations outside areas with geopolitical risk, and it came with 149 potential drilling opportunities. The operating cost structure and favorable royalty and tax structure of the area support growth at current oil prices and provide opportunities to increase reserves and production in proven plays using advanced horizontal drilling and multi-stage frac technology. In 2019, TransGlobe plans to drill 4 horizontal Cardium wells (3 development and 1 outpost) to maintain and grow Canadian light oil production.
- Based on a January 2019 GLJ Petroleum Consultants evaluation, the Company reported 26.9 MMboe total proved (1P reserves) as well as 44.1 MMboe total proved + probable (2P reserves), ~2% and 4% decreases, respectively, from 2017 year-end.
- TGA had inventoried entitlement crude oil in Egypt of 647.0 Mbbls as of 3/31/19 valued at \$16.56/barrel on its balance sheet, which is slightly up from levels reported as of 12/31/18 of 568.1 Mbbls.
- For 2019, corporate production is expected to range between 14,000 and 15,000 Boepd (midpoint 14,500) with a 94% weighting to oils and liquids; this includes 11,600 to 12,400 Bopd for Egypt, and 2,400 to 2,600 Boepd for Canada.

On a comparable company basis for FY19 estimates, TGA currently trades at an EV/S multiple of 0.9x while its peers trade at an average multiple of 2.1x, and at an EV/EBITDA of 1.7x vs. the average of its peers at 3.9x. See page 9 for details.

## **BUSINESS OVERVIEW**

TransGlobe Energy Corporation was incorporated in 1968 as a mineral exploration and extraction company and entered the oil and gas exploration and production market in 1992. The Company had properties in the U.S., and later in Yemen, Canada and Egypt. TGA sold its U.S. properties in 2000 to fund opportunities in Yemen and began operations in Egypt in 2004. In 2008, TGA divested its Canadian assets, which were mostly gas producing properties, to fund opportunities in Egypt and Yemen. In 2014, TransGlobe exited Yemen, primarily because of the political environment. TransGlobe re-entered Canada at yearend 2016 by acquiring production and working interests in properties located in west central Alberta, and the Cardium drilling program began in 2H18.

TransGlobe's initial entry into Egypt was challenging as political unrest in Egypt fueled by the Arab Spring uprisings made collecting receivables from the Egyptian government difficult. In 2013, when the accounts receivable total from the government of Egypt was approaching \$250 million, the management team, led by then CEO Ross Clarkson, took aggressive steps to reverse the trajectory of the Company, including renegotiations with the government-owned Egyptian General Petroleum Corporation (EGPC) and significant cost-cutting measures.

In recent years, under Egyptian President el-Sisi, Egypt has emphasized the importance of foreign investment, and with Egypt's cooperation, TransGlobe began directly marketing Eastern Desert entitlement crude oil to international buyers in 2015 without the Egyptian government acting as a middleman, which has improved liquidity and decreased credit risk. The Company completed its first direct sale of Egyptian crude oil to a third-party buyer in Q1 2015.

In February 2017, TGA's subsidiary, TransGlobe Petroleum International, Inc. (TPI) completed a \$75 million crude oil prepayment agreement with Swiss-based Mercuria Energy Trading SA. This is an important strategic relationship that management hopes to broaden over time. In conjunction with the agreement, TPI entered into a marketing contract with Mercuria to market nine million barrels of TPI's entitlement production, with pricing based on indexed market prices at the time of sale, which incentivizes Mercuria to deliver the best pricing. The initial advance was used to refinance the 6.0% convertible debentures that matured in March 2017, with subsequent funds used for working capital purposes.

Overall for 2018, the Company completed 4 crude oil cargo liftings and additionally sold over 318 Mbbls of inventoried entitlement crude oil to EGPC. Most recently in Q119, TransGlobe reported a cargo lifting mid-March for net proceeds of ~\$25 million.

## **RECENT RESULTS**

On May 13, 2019, the Company announced Q119 financial and operating results. Management disclosed production on average of 15,924 Boepd for Q119, and the Company had average sales volume of 15,047 Boepd for the quarter. Funds flow from operations was positive at \$15.2 million, or \$0.21/share, and the Company reported a net loss of \$8.8 million, which includes an \$8.4M impairment loss as well as a \$4.8M unrealized loss on derivative commodity contracts.

The Company's inventoried entitlement crude oil in Egypt as of 3/31/19 was reported at  $\sim$  0.6 million (slightly up from levels reported as of 12/31/18 of 568.1 Mbbls), which was valued at \$16.56/bbl on the balance sheet, and all production in Canada was sold during the quarter. TGA reported \$24.7M in cash on hand at 3/31/19 (as well as positive working capital of \$43.6M). During Q119, the Company reported exploration and development activities in Egypt and Canada, including the following high level details:

- Drilled 2 oil wells in Egypt, the M-10 Twin and NWG 38A-8, and also re-entered/deepened the K-8 WDW and K-10 WDW water disposal wells
- Submitted a development lease application for South Ghazalat, targeting production prior to year-end (subsequently approved by the Ministry of Petroleum)
- Equipped and tied in 6 Cardium oil wells in the Harmattan area (part of 2018 capital program) just after the new year
- Subsequent to quarter-end, TGA drilled a new pool oil well HW-2X in West Bakr, with an estimated 113 feet of net oil pay, which was put into production with an initial rate of ~625 bbls/d
- Also following the close of Q119, a development oil well H-30
  was drilled with an estimated 25 feet of net Yusr oil pay

Most recently reported reserves for TransGlobe are as of year-end FY18 with 44.1 MMBoe of 2P reserves, which was down from 2017 levels of 45.9 MMboe.

Exhibit 1: TransGlobe Reserves

2018 Reserves Summary	1P	2P	3P
2017 Year End Reserves (MMboe)	27.5	45.9	62.9
2018 Adds/Revisions	4.7	3.5	4.2
2018 Production		-5.3	
2018 Year End Reserves (MMboe)	26.9	44.1	61.8

Production Replacement Ratio (%) – (ex A&D, economic factors)	89%	68%	88%
NPV 10% Before tax \$MM Dec 31/18	\$231	\$339	\$446
NPV 10% After tax \$MM Dec 31/18	\$227	\$323	\$421

Source: Company Reports

## **GROWTH STRATEGY**

TGA is a well-managed company that is focused on cash flow and building value over the longer term. The 2019 capital budget has been set at roughly \$34.1 million, before capitalized G&A. This budget amount includes ~\$24.1M for Egypt and ~\$10.0 for Canada. TGA disclosed that the 2019 drilling program will encompass 2 Eastern Desert exploration wells in addition to 4 development wells and multiple recompletions/well optimizations, as well as a facility expansion; in the Western Desert, the Company will appraise and develop the SG 6X light oil discovery. We expect 4 Canadian horizontal Cardium wells three development wells and 1 outpost well, evaluating the Harmattan South acreage. The Company has noted that the 2019 capital program is balanced to anticipated funds flow, and the numbers could be adjusted according to changes in Brent pricing. Additionally, TGA will continue to look for acquisition opportunities principally in Egypt and the region.

Source: Company Reports

Also, the Company disclosed 2019 production estimates of 14.0 to 15.0 MBoepd with a mid-point of 14.5 MBoepd; this includes production in Egypt of 11.6 to 12.4 MBopd in 2019 and production in Canada of 2.4 to 2.6 MBoepd.

Source: Company Reports

## **EGYPTIAN PORTFOLIO**

TransGlobe reported year-end 2018 gross reserves of 25.7 MMbbl 2P. The Company has two areas of focus in Egypt: (1) the Eastern Desert—West Gharib, West Bakr, North West Gharib, and (2) the Western Desert - South Alamein and South Ghazalat.

Exhibit 4: TransGlobe's Egyptian Assets

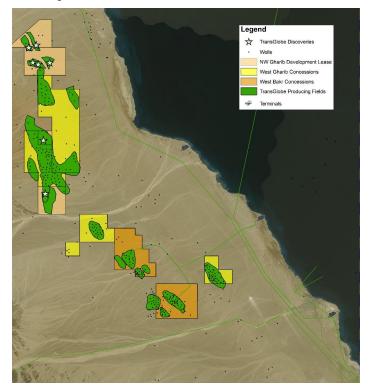

Source: Company Reports

## THE EASTERN DESERT

TransGlobe has three operated concessions in the Eastern Desert: West Gharib, West Bakr, and North West Gharib.

### Exhibit 5: Eastern Desert Concessions

Quarterly Eastern Desert Production (bbls/d)	2019			
	Q1	Q4	Q3	Q2
Gross production rate <sup>1</sup> TransGlobe production (inventoried) sold	13,616 (877)	12,970 (787)	11,939 159	11,913 5,521
Total sales	12,739	12,183	12,098	17,434
Government shares (royalties and tax)	7,711	7,292	6,645	6,612
TransGlobe sales (after royalties and tax) <sup>2</sup>	5,028	4,891	5,453	10,822
Total sales	12,739	12,183	12,098	17,434

<sup>&</sup>lt;sup>1</sup> Quarterly production by concession (bbls/d):
West Gharib - 4,238 (Q1-2019), 4,512 (Q4-2018), 4,793 (Q3-2018), and 5,015 (Q2-2018)
West Balar - 3,132 (Q1-2019), 7,323 (Q4-2018), 6,126 (Q3-2018), and 5,747 (Q2-2018)
North West Gharib - 1,246 (Q1-2019), 1,135 (Q4-2018), 1,020 (Q3-2018), and 1,151 (Q2-2018)

### West Gharib (100% working interest, operated)

In September 2007, TransGlobe acquired and began operating 8 development leases with 24 producing wells in West Gharib, Egypt. A year later, in August 2008, the Company increased its working interest in the property to 100%. This oil has a high sulfur content, and must be refined outside of Egypt, generally in Europe or Asia.

The West Gharib concession has historically been, and continues to be, one of the TransGlobe's most prolific and valuable areas of operations. Through exploration discoveries, development drilling, and improvements to water flooding, the Company increased production by more than 400% from initial production in 2007 to 2013 and most recently reported the levels shown in the table above.

### Recent (O1 2019) operations and production:

No wells were drilled during the quarter

### West Bakr (100% working interest, operated)

Immediately adjacent to the West Gharib concession is the West Bakr concession, which TransGlobe acquired in late 2011. The proximity to West Gharib provides the Company with synergies and increases operating leverage in this region.

TGA has identified multiple drilling opportunities and enhancement/development projects that could add to production and increase recoverable reserves. Due to the proximity of the fields, knowledge gained in increasing production at West Gharib has been applied at West Bakr. The West Bakr concession contains three fields—H, M, and K. Like West Gharib, the oil produced in West Bakr has a high sulfur content. The oil produced in these fields is transported via pipeline to the Ras Gharib terminal on the Gulf of Suez.

### Recent (O1 2019) operations and production:

- The M-10 twin well targeting the Asl A pool was completed; it replaces the original M-10 that has been producing since 2000 (this well was suspended and abandoned due to casing integrity)
- The M-10 twin well was placed into production in February 2019 and is currently producing ~400 barrels/day
- TGA re-entered/deepened 2 suspended oil wells (K-8 WDW and K-10 WDW) and converted them to water disposal wells
- The Company commenced K Station Phase 3 to triple the original fluid handling capacity to ~45,000 per day, with project completion expected in 2H19
- Subsequent to quarter-end, TGA drilled two wells, resulting in oil discovery at HW-2X and a development well at H-30
- HW-2X was drilled to a depth of 5,425 feet and cased as a
  Yusr oil well (estimated 113 feet of net oil pay encountered);
  the well was completed and placed on production at an
  initial rate of ~625 bbls/day
- H-30 was drilled to a depth of 5,454 feet and also cased as a Yusr oil well (estimated 25 feet of net oil pay encountered); completion and production is scheduled for Q219

#### North West Gharib (100% working interest, operated)

The Egyptian government ratified the North West Gharib concession into law in November 2013. TGA's North West Gharib property covers ~11,000 acres. TGA completed the exploration of the concession on schedule in April 2017 and relinquished all of the exploration properties other than the properties designated on the map in Exhibit 5, where the Company received four 20-year development licenses.

### Recent (Q1 2019) operations and production:

- NWG 38A-8 was drilled to a depth of 5,350 feet and cased as a Red Bed oil well/water injector; based on wireline logs and samples, it appears that NWG 38A-8 has successfully extended the Red Bed oil pool to the south
- NWG 38A-8 was completed and placed on production at an initial rate of 45 bbls/day and 100 bbls of water/day
- Based on these results, the well was converted to a water injection well post quarter-end for the NWG 38A pool

<sup>&</sup>lt;sup>2</sup> Under the terms of the Production Sharing Concession Agreements, royalties and taxes are paid out of the Government's share of production sharing oil

#### THE WESTERN DESERT

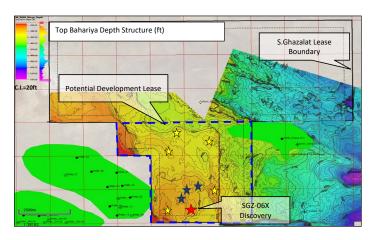

TransGlobe currently operates in the Western Desert over two concessions; South Alamein and South Ghazalat.

#### South Ghazalat

In November 2013, TransGlobe acquired a 100% working interest in the South Ghazalat concession. The 349,302-acre South Ghazalat PSC is located in the prolific Abu Gharadig basin. At South Ghazalat the Company committed to a work program of \$8 million in the first phase, which has been met, and consisted of 400 square kilometers of 3-D seismic and two wells. During Q418, the Company drilled prospect SGZ 6X in the eastern portion of the concession to a depth of 5,195 feet and cased it as a potential Bahariya light oil discovery. Based on positive testing results, the Company filed a declaration of a Commercial Discovery with EGPC (as well as an initial development plan in February 2019) and is targeting Q419 for production. TransGlobe has received a 6 month extension for the current exploration phase through May 6, 2019, and the Company has already met the commitments for the concession for the 2018 year.

TGA has submitted permits to also drill an appraisal well in the SGZ 6X pool during 2H19 concurrent with the construction of an early production facility and has initiated a project to merge and reprocess 2 existing 3D seismic surveys over the leased concession area. The Company is also committed to drill one additional exploration well under the agreement.

Exhibit 6: South Ghazalat

Source: Company Reports

#### **South Alamein**

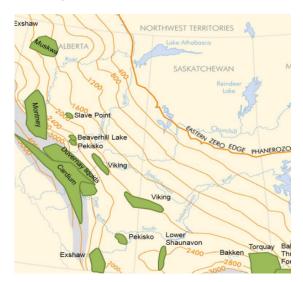

The Company acquired South Alamein in 2012 but has not been able to gain full access to the concession due to military restrictions. Areas accessed resulted in disappointing exploration results. While the Company continues discussions with EGPC, given historical results at the Boraq area, restricted access issues, and the high risks of the upside potential associated within the concession, TGA fully impaired the carrying value of the South Alamein intangible assets for ~\$8.4M in Q119.

## **CANADIAN PORTFOLIO**

At the end of December 2016, the Company re-entered Canada, acquiring production and high working interest assets (88% of current production) in the Harmattan area of west central Alberta, an area with proven, low-risk Cardium light oil and Mannville liquids-rich gas. The Canadian portfolio, which is just 40 minutes from the Company's headquarters in Calgary, includes ~ 85,000 gross acres. Total consideration in the transaction was approximately \$59 million. Most recently the Company reported 2P reserves of 18.4 MMBoe for the Canadian asset.

The Cardium formation in central Alberta currently has over 10,000 producing wells (3,900 of which are horizontal wells). The royalty and tax structure and the low operating costs make this area especially attractive in the current pricing environment. The Cardium property that TransGlobe purchased contains 39 horizontal wells drilled in 2012 and 2013 using an older technology with average frac density of 18 fracs per linear mile. TransGlobe is using a 40-stage frac program on these wells, which they expect will provide a substantially higher recovery rate. The property also contains 100% interest in central oil battery and flow lines with under-utilized capacity. The other play in the acquisition, the Ellerslie/Viking sands, is a deeper gas play that the Company may drill as gas prices improve.

Exhibit 7: Tight Oil Developments in the Western Canada Sedimentary Basin

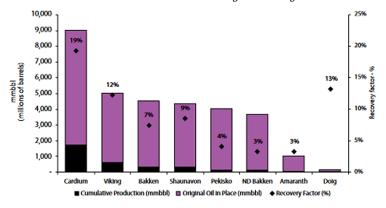

Source: Canadian National Energy Board

Importantly, the acquired assets provide a stable production base, with a low decline rate and access to surplus infrastructure that will accommodate production growth. The acquisition provided 149 gross potential drilling locations and the opportunity to materially increase reserves and production using horizontal drilling and multi-stage frac technology. TransGlobe management has stated the Company will be seeking additional synergistic opportunities in Canada that can be tucked into its existing infrastructure. For example, the Company purchased an additional 1600 acres of Cardium rights in the Harmattan area in 2018, which increased the Cardium drilling location inventory by up to 30 locations (success dependent).

Industry reports often cite original oil in place (OOIP) for regions with proven or potential oil and gas potential. Simply put, the OOIP is the amount of oil trapped in underground reservoirs. Exhibit 9 illustrates the potential for additional recovery from existing fields in western Canada if new technologies are applied. The graph illustrates the amount of oil recovered to date compared with the estimated OOIP. The percentage value indicates the amount of oil that has been recovered from the reservoir to date. Using horizontal drilling and multi-stage hydraulic fracturing, the industry is successfully extracting significant oil from older reservoirs.

Exhibit 8: The Cardium in Canada Is a Tight Oil Play

Source: Canadian Society for Unconventional Resources

The Cardium formation in western Canada is known as a tight oil play. Tight oil is conventional oil that is often found in regions where reservoir properties inhibit production using conventional drilling. Typically, horizontal drilling combined with multi-stage fracturing is used to access these difficult to produce reservoirs. Tight oil is high quality and requires very little refinement, and existing surface infrastructure can often be utilized, reducing capital investment.

Extensive oil and gas resources are known to be present in these reservoirs; however, these resources typically will not flow to the wellbore at economic rates without using advanced drilling techniques. Many of the larger IOCs, such as Apache (NYSE: APA), have taken the easily assessed, low-hanging fruit in their fields, and are selling these assets in the Cardium to smaller companies. Apache recently sold its Cardium assets producing 5,000 Boepd to Cardinal Energy, Ltd. (TSX: CJ).

Per the Company's last filing, Canadian production was as follows:

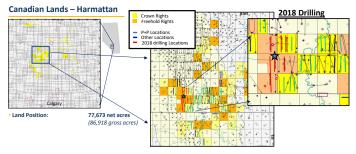

Quarterly Canada Production (boe/d)	2019		2018	
	Q1	Q4	Q3	Q2
Canada crude oil (bbls/d)	894	495	567	497
Canada NGLs (bbls/d)	470	829	876	521
Canada natural gas (mcf/d)	5,663	5,865	5,695	5,094
Total production (boe/d)	2,308	2,302	2,392	1,867

The Cardium drilling program initially began Q318, with the Company drilling and casing the first three of six one-mile horizontal wells that were drilled from a common pad to reduce costs and improve efficiencies. In Q418, TransGlobe completed drilling and cased the remaining three wells in the program, which included a two-mile extended reach horizontal well and two one-mile wells. Following frac stimulation, the wells were placed into production early 2019 in a systematic manner in order to maximize ultimate recoveries; however, cold weather and a series of power outages somewhat impeded the initial results. Additionally, the Company recently completed construction of a 2.7 kilometer pipeline to connect the wells to the central production facility.

Subsequent to quarter-end, TGA initiated permitting for the 2019 drilling program consisting of 4 net horizontal wells targeting the Cardium formation in the Harmattan area (3 development wells and 1 outpost well).

Per a recent filing, the Canadian assets were detailed as follows:

### Exhibit 9: Canadian Assets

### 2018 Program

- Drilled 6 Hz Cardium oil wells (5 one mile, 1 two mile)
- On production in Jan 2019

#### 2019 Plan\*

 4 HZ Cardium well drill program (3 development in Harmattan and 1 outpost in Harmattan South)

#### Reserves:

- 1P 11.0 Mmboe<sup>1</sup> at Dec 31. 2018
- 2P 18.4 Mmboe<sup>1</sup> at Dec 31, 2018
- ~ 65% light oil and liquids

(1) Based on GLJ evaluation dated 12/31/18; 6 Mcf = 1 Boe

## **INDUSTRY**

In response to a changing set of dynamics, a number of trends are shaping the oil and gas sector:

Cost cutting measures - Plummeting oil prices, beginning in June 2014, prompted a surge in cost reduction measures among upstream companies, with IOCs cutting capex by roughly 40% between 2014 and 2016. Projects during that time and beyond were canceled or delayed. As a result of cost cutting initiatives, combined with efficiency improvements, projects in recent years are now in the position to break even with much lower oil prices.

**Recent price gains** – In 2016, OPEC, Russia and their allies struck a deal to end the price slump and re-balance an oversupplied market; they set a target of bringing oil inventories held by members back in line with the five-year average. After several years of supply curbs, they've made significant progress. However, recent news suggests that they might be re-evaluating their original metrics and could continue to push for further restrictions and continue supply curbs.

**Free cash flow** - Given the unpredictability of the market, companies' business plans emphasize profitability that is sustainable under multiple price scenarios. Growth in production and reserves has often been the key metric driving oil and gas companies. However, in the current climate, with the specter of rising interest rates and cost of debt, free cash flow from earnings is a priority.

**Specialization** - Companies are specializing in capabilities that are key to their growth. The scenario involving large oil companies discovering, developing and operating fields until depletion has given way to ownership changes that match the specialized capabilities of companies with the life cycle of the field.

**Mergers and acquisitions** - M&A should increase for upstream companies as they re-evaluate their portfolios in the current environment. This strategy enables companies to divest of noncore assets and add properties that match their strategic direction, strengths and capabilities.

**Short-term EIA outlook** – The U.S. Energy Information Administration (EIA) reports that global petroleum and liquid fuels inventories (OECD countries) declined by about 0.7M barrels per day in 2018, but a decline of only 0.3M is expected in 2019. EIA projects that OPEC crude oil production will average 30.1 million barrels per day in 2019, down ~1.9M barrels per day from 2018. Brent spot prices, which averaged ~\$71/barrel in 2018, are expected to average ~\$67/barrel in 2019.

## RISKS

**Environmental and government regulation** – Federal, state and international laws and regulations relating to the release of materials into the environment and the disposal of wastes from oil and gas activities may affect the Company's business and increase costs.

**Price volatility** - Prices for crude oil sales have historically been unpredictable and volatile, and that volatility is expected to continue.

**Political and economic instability** – The country of Egypt experienced instability following the Arab Spring movement. TransGlobe's business may be adversely affected by changes in political and economic conditions in Egypt.

**Reserve estimates** – Reserve estimates in the oil industry, particularly for new discoveries, are inherently imprecise. Inaccuracies in assumptions could affect the estimated quantities.

# **INCOME STATEMENT**

## **VALUATION**

On a comparable company basis for FY19 estimates, TGA currently trades at an EV/S multiple of 0.9x while its peers trade at an average multiple of 2.1x, and at an EV/EBITDA of 1.7x vs. the average of its peers at 3.9x. On a P/CFPS basis, TGA trades at 1.3x based on 2019E vs. the average of its peers at 2.3x, and on a P/E basis, at 14.1x vs. 10.0x. We note that we have recently added to our 2019 estimates the impairment loss of ~\$8.4M as well as the realized loss on derivative contracts of ~\$5.0M reported in the first quarter of FY19.

Additionally, the Company is well-positioned to continue profitability in the near-term based on:

- Execution of a disciplined business plan to drive free cash flow, with a focus on maintaining costs
- A multi-year development strategy for its Canadian assets to ensure stable growth
- Continuing to secure key contracts with the Egyptian government and third-party marketers
- Goal of modernizing and consolidating the Eastern Desert concessions to unlock large oil in place development projects
- Consideration of additional acquisition opportunities in Egypt and Canada
- The Company's experienced management team, which has successfully steered TGA through difficult periods involving low oil prices and political turmoil

We would expect that investors in TGA could benefit from price appreciation in the upcoming quarters as progress continues to be made, and the stock begins to trade more in-line with the metrics of its peers.

## **IMPORTANT DISCLOSURES AND DISCLAIMERS**

The following disclosures are related to Stonegate Capital Partners (SCP) research reports.

**ANALYST DISCLOSURES** - I, Laura S. Engel, CPA, hereby certify that the view expressed in this research report accurately reflects my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the recommendations or views expressed in this research report. I believe the information used for the creation of this report has been obtained from sources I considered to be reliable, but I can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice.

INVESTMENT BANKING, REFERRALS, AND FEES FOR SERVICE - SCP does not provide nor has it received compensation for investment banking services on the securities covered in this report. SCP does not expect to receive compensation for investment banking services on the securities covered in this report. SCP has a non-exclusive Advisory Services agreement to provide research coverage, retail and institutional awareness, and overall Investor Relations support for which it is compensated \$1,500 per month. SCP may engage outside consultants, SCP or SMC employees to assist in the preparation of this report or other reports released by SCP. The principles of SCP may review and or alter the content of SCP research reports based on their sole discretion. While the SCP analyst may receive input from the Company during the preparation of the report, ultimately the unbiased opinions expressed in the report are those of the analyst. Stonegate Capital Markets "SCM" (Member FINRA) is an affiliate of SCP and may seek to receive future compensation for investment banking or other business relationships with the covered companies mentioned in this report. In certain instances, SCP has contracted with SCM to produce research reports for its client companies. SCP pays SCM a monthly retainer for said services.

**POLICY DISCLOSURES** - SCP analysts are restricted from holding or trading securities in the issuers that they cover. SCP and SCM do not make a market in any security nor do they act as dealers in securities. Each SCP analyst has full discretion on the content and valuation discussion based on his or her own due diligence. Analysts are paid in part based on the overall profitability of SCP. Such profitability is derived from a variety of sources and includes payments received from issuers of securities covered by SCP for services described above. No part of analyst compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in any report or article. No employee of SCP serves on the Company's Board of Directors. Research analyst and/or a member of the analyst's household do not own shares of this security. The research analyst and/or a member of the analyst's household do not serve as an officer, director, or advisory board member of the Company. This security is eligible for sale in one or more states. This security is subject to the Securities and Exchange Commission's Penny Stock Rules, which may set forth sales practice requirements for certain low-priced securities. SCP or its affiliates do not beneficially own 1% or more of an equity security of the Company. SCP does not have other actual, material conflicts of interest in the securities of the Company. Stonegate relies upon the "publishers' exclusion" from the definition of investment adviser under Section 202(a)(11) of the Investment Advisers Act of 1940 and corresponding state securities laws. As such, Stonegate does not offer or provide personalized advice. We publish information about companies in which we believe our readers may be interested and this information reflects our sincere opinions.

ADDITIONAL INFORMATION - Please note that this report was originally prepared and issued by SCP for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of SCP should seek the advice of their independent financial advisor prior to making any investment decision based on this report or for any necessary explanation of its contents. The information contained herein is based on sources, which we believe to be reliable, but is not necessarily complete and its accuracy cannot be guaranteed. Because the objectives of individual clients may vary, this report is not to be construed as an offer or the solicitation of an offer to sell or buy the securities herein mentioned. This report is the independent work of SCP and is not to be construed as having been issued by, or in any way endorsed or guaranteed by, any issuing companies of the securities mentioned herein. The firm and/or its employees and/or its individual shareholders and/or members of their families and/or its managed funds may have positions or warrants in the securities mentioned and, before or after your receipt of this report, may make or recommend purchases and/or sales for their own accounts or for the accounts of other customers of the firm from time to time in the open market or otherwise. While we endeavor to update the information contained herein on a reasonable basis, there may be regulatory, compliance, or other reasons that prevent us from doing so. The opinions or information expressed are believed to be accurate as of the date of this report; no subsequent publication or distribution of this report shall mean or imply that any such opinions or information remains current at any time after the date of this report. All opinions are subject to change without notice, and we do not undertake to advise you of any such changes. Reproduction or redistribution of this report without the expressed written consent of SCP is prohibited. Additional information on any securities mentioned is available on request.

**RATING & RECOMMENDATION** - SCP does not rate the securities covered in its research. SCP does not have, nor has previously had, a rating for any securities of the Company. SCP does not have a price target for any securities of the Company.
