COMPANY DESCRIPTION

Steppe Gold Ltd. (TSX: STGO) is a precious metals exploration and production company with current operations in Mongolia. The Company is currently developing its 100% owned Altan Tsaagan Ovoo Gold Project (ATO) acquired from Centerra Gold in September 2017, with expected production to begin in the second half of 2019. The Company's portfolio also contains an 80% ownership in an exploration-stage mineral property called the Uudam Khundii (UK) with a 20% joint venture partner. Steppe Gold became public as the only main board mining IPO in 2018 raising \$25 million. The Company is headquartered out of Toronto, ON.

SUMMARY

- Steppe Gold's flagship project Altan Tsaagan Ovoo (ATO) is fully constructed and awaiting final cyanide permitting with gold production anticipated to begin in the second half of 2019. As of 6/30/2019, the Company has completed internal commissioning of the ADR plant and awaiting final cyanide permitting before irrigation and gold production can commence.
- The Company has been trial mining at ATO since November 2018, which has accumulated 230,000 tons mined at a grade of 2.3g/t gold for approximately 17,000 oz of gold currently crushed and stacked on Cell 1 of the leach pad.
- The ATO property is projected to produce strong annual cash flows once
 production commences with initial years of production expected to produce
 ~40,000 oz of gold per annum from the heap leach operation with cash cost per
 ounce of ~US\$550.
- Upside potential for the flagship project remains as Steppe has three diamond core
 exploration drilling rigs focusing on resource extensions at ATO1 and ATO4 as well
 as Mungu, a high grade, near surface gold and silver potential site located
 northeast of the current resources at the ATO project. These expansion projects
 could lead to an increase in resources and expanded 150,000 oz per annum fresh
 rock crush and CIL operation.
- Steppe Gold's Uudam Khundii (UK) property currently encompasses 14,397 hectares located 800km south-west of Ulaanbaatar and holds one exploration license. Steppe Gold has commenced initial exploration activities on the property including geological mapping, geochemical sampling, geophysical surveys, and trenching.
- STGO's management is well established and has a long operating history in Mongolia. Matthew Wood, CEO, was formally the founder and executive chairman of Mongolian coal company, Hunnu Coal limited and has been awarded the Order of the Polar Star, the highest state honor that can be awarded a non-citizen of Mongolia. Mr. Wood has many key relationships in Mongolia and brings over 25 years of mining and commodities investing experience to the team.
- The Company announced a private placement of US\$8.4 million completed in August 2019. Due to additional interest, the offering increased from the original US\$5.4M of 10% 2-year unsecured convertible debentures exercisable at CAD\$0.90/sh. Anticipating near term approval of the final cyanide permit, this should be sufficient to fund the Company's operations to profitability.
- The Company has strong ownership from key shareholders and insiders. The top 4 shareholders consisting of LIM advisors (11.94%), Atmacorp Asset Management (6.05%), Triple Flag Mining Finance (5.00%), and Elliott Management Corp. (3.6%) own approximately 26.6% of the shares outstanding.
- Based on our DCF and Comparable Companies analysis of STGO, we arrive at a valuation range of ~CAD\$0.61 to \$1.85, with a midpoint of ~\$1.20; see page 7 for further details.

BUSINESS OVERVIEW

Steppe Gold is a precious metals exploration and development company based out of Toronto, ON, that is focused on developing their existing assets in Mongolia. The Company currently has 3 assets consisting of their flagship Altan Tsaagan Ovoo (ATO) project, Mungu discovery, and Uudam Khundii (UK) project.

The Company purchased their flagship property, ATO, from Centerra Gold Inc. in 2017 with the goal of establishing a nearterm, low cost producing mine as the company's initial project. Steppe Gold became the only mining IPO on the Toronto stock exchange in 2018 when they announced the closing of its initial public offering on May 22nd, 2018. The offering saw the Company issue 10.6M Units at a price of C\$2.00 per unit for gross proceeds of C\$21.1M. Each Unit is composed of one common share and one warrant exercisable at C\$2.34 for 24 months, or until May 2020. The Company used proceeds from their IPO to fund working capital and complete construction of their heap leach plant at ATO.

Exhibit 1: Step Gold's Mongolian Operations

Source: Company Reports

In addition to the flagship project purchased from Centerra Gold, Steppe Gold has also been focused on developing two additional properties. The Mungu discovery, located northeast of the ATO project, is an epithermal gold-silver system with localized bonanza grades. The stage 2 drilling, which was finished in Summer 2018, delivered the first visible gold seen with super high grades being recovered. Stage 3 saw 8 drill holes completed with results expected 2H 2019.

Lastly, the Uudam Khundi (UK) project is comprised of one exploration license granted in August 2017, covering 14,397 hectares roughly 800km south west of Ulaanbaatar. The property is between two known gold deposits explored by Erdene Resource Development, the Bayan Khundii gold discovery and Altan Nar epithermal gold deposit.

Steppe Gold's goal is to become one of the leading gold producers in Mongolia with regional consolidation opportunities present. The mining sector currently accounts for 20% of GDP and 80% of exports in Mongolia and is a large economic driver of growth in the region. The current majority government, the Mongolian People's Party, is a supporter of foreign investment into the region and recently approved the "Gold-2" program to support gold

companies and double annual gold production in the country by 2020. There are several competitors currently operating in the region including Erdene Resources (TSX:ERD), Rio Tinto Group (LSE: RIO), and Xandu Mines (ASX: XAM).

The Company's CEO, Matt Wood, has extensive operating history in the country including the founding of a Mongolian Coal Company, Hunnu Coal Limited, which Mr. Wood sold to Banpu PCL in 2011 for US\$500M. The Company is hoping to leverage Mr. Wood's extensive experience and key relationships in Mongolia to continue growing Steppe's resources and low-cost production.

As of the most recent filing for the period ended on June 30, 2019, the Company has reported the completion of the heap leach plant at ATO and satisfactorily completed internal commissioning of the ADR plant. The Company has been trial mining and is currently awaiting final cyanide permitting before gold production can begin. The Company is expecting the permitting in Q4 2019.

Exhibit 2: ATO Project Site

Source: Company Reports

ALTAN TSAGAAN OVOO (ATO) PROJECT

The Company's Altan Tsagaan Ovoo (ATO) project was purchased from Centerra Gold in 2017. Located in the territory of Tsagaan Ovoo soum in Eastern Mongolian, the ATO project is comprised of one mining license for an area of 5,492.63 hectares. After acquiring the property in 2007, Centerra invested US \$25 million into the area drilling 597 holes and a total of 63,866m of exploration. Centerra also completed geologic mapping, soil and outcrop sampling, and a gravity survey. In a technical report in October 2017, a developmental plan for a heap leach operation was formed for an estimated cost of US\$19.6 million and total operating cost of \$48.8 million. The project was estimated to produce roughly 147K ounces of gold and 673K ounces of silver over the life of the mine.

In May 2018, Steppe Gold finalized a gold and silver streaming agreement with Triple Flag Mining Finance to receive US\$23M to establish the heap leach plant at ATO. The goal of the project is to leverage the US\$25million investment made by Centerra in order to quickly scale gold and silver production that will create high margin cash flow for the business. The estimates of current cash cost per ounce are less than US\$550, which would create a healthy cash flow margin based on current spot rates around US\$1,500/oz.

Exhibit 3: Production and Cost Profile

Source: Company Reports

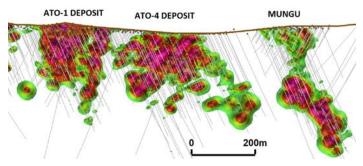

The majority of the ATO gold and silver is contained in three vertical pipes named ATO 1, ATO 2, and ATO 4. The Company has based these resources off of 32,791 samples from 238 drill holes, most of which were completed prior to STGO's acquisiton of the project.

Exhibit 4: ATO Project Site

Source: Company Reports

Exhibit 5: 3D View of estimated Au block grades at ATO pipes

Source: Company Reports

The richest of these gold deposits is at ATO 1 with measured and indictated grams per ton (g/t) at 1.48. The current combined measured and indicated reource by deposit shows 208k oz of gold and 1.68 million oz of silver from all 3 deposits. We note that these deposits have potential to vary as the first 230,000 tons trial mined at ATO returned a gold grade of 2.3 g/t.

Exhibit 6: Oxide Resource by Deposit

Oxid	le Resource	by Deposit		
M&I Resource by Deposit	g/t Au	Koz Au	g/t Ag	Koz Ag
ATO 1	1.48	144	9.37	912
ATO 2	0.62	25	4.81	190
ATO 4	1.25	40	18.06	579
Total / Average	1.23	208	9.96	1,680

Source: Company Reports

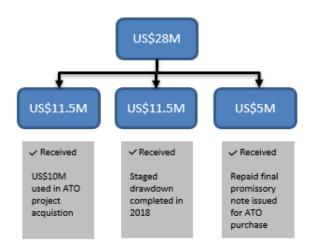

The ATO plant is an open pit heap leaching project that will provide a cost effective way to extract the 208k oz of gold from the earth. The process of heap leaching involves using a chemical reaction to separate the desired minerals like gold and silver from the ore. Steppe Gold will specifically truck in crushed ore from the mine to place onto collection pads, which will then be treated with cyanide in order to pull the gold and silver from the ore at the recently completed absorbtion, desorption, and refining (ADR) plant. The current mine resources at ATO are expected to be processed over the course of 4.5 years, however, it is possible that resource expansion may occur.

In order to finance the mine, Triple Flag Mining Finance agreed to a streaming contract wherein Triple Flag would deliver US\$23 millon to STGO in two separate \$11.5M tranches. As of September 2019, Steppe Gold and Triple Flag amended the agreement where Triple Flag would advance an additional US\$5 million to STGO bringing the total to \$28 million. In return for the upfront capital, Steppe Gold is obligated to sell Triple Flag 25% of the gold and 50% of the silver produced from the ATO project at 17% of the spot rate until Steppe has sold an aggregate of 46,000 ounces of gold and 375,000 ounces of silver, respectively. After Steppe Gold has reached these amounts, the obligation to sell is capped at 5,500 ounces of gold and 45,000 ounces of silver for the life of the mine within the stream area. Given the low start up cost and economics of the heap leaching plant, the Company is still anticipated to have a healthy cash flow margin when taking the agreement into account.

Exhibit 7: Triple Flag Streaming Agreement

TRIPLE FLAG STREAM AGREEMENT SUMMARY

Metals Delivery Obligations:

25% of gold & 50% of silver produced at ATO for 17% of prevailing spot prices

Equity Placement

C\$4M invested at C\$2.00/unit (~6.4% Pre-IPO interest)

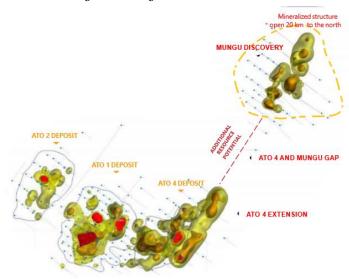

Source: Company Reports, Stonegate Capital

The Company has been trial mining at ATO since November 2018 and has mined 230,000 tons with a grade of 2.3g/t for approximately 17,000 ounces of gold. This material has been crushed and stacked on cell 1 of the leach pad with leaching ready to commence once the final cyanide permit has been received. The Company is anticipating to produce approximately 40,000 oz of gold annually in the initial years with a cash cost of less than US \$550/oz, including royalties. After production begins, the company plans to conduct a feasibility study on expanding to a larger fresh rock crush and grind CIL operation which could produce upwards of 150,000 ounces of gold annually.

MUNGU DISCOVERY

The Mungu Gold and Silver discovery is located northeast of the resources at the ATO project. It is a structurally controlled epithermal gold-silver system with localized Bonanza grades. In Q4 2018, the Company finished a Stage 3 drilling program totaling 8,000m in the Mungu Deposit, Mungu Gap, and the Mungu Extended prospects. The initial drill results at Mungu were promising including the first visible gold being seen at ATO with super high grades being returned.

Exhibit 8: Mungu Discovery

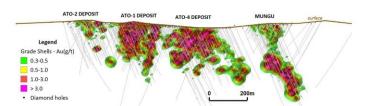

Source: Company Reports

The first drilling by Steppe at Mungu returned 15g/t Au and 82 g/t Ag over 46m. The Mungu discovery has the potential to drastically increase the size of the resource for Steppe Gold, with internal geologists suggesting the possibility of an established resource of 500k oz at Mungu.

In addition to the 20 km mineralized structure northeast of the ATO project, there is additional resource potential at the ATO 4 extension and Mungu Gap. To date, there has been very few effective drill holes established away from the Mungu Discovery.

Exhibit 9: Initial Mungu Highlights

Source: Company Reports

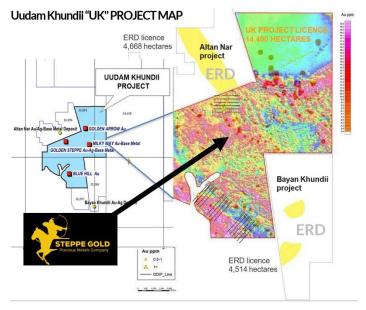

Unfortunately, due to Steppe's current cash position, the company has delayed further drilling at Mungu until the cyanide permit for ATO has been received and production begins. With the Cyanide permit anticipated over the next few weeks, the Company believes drilling could continue and results could be provided by year-end 2019.

UUDAM KHUNDII (UK) PROJECT

The Uudam Khundii Project is comprised of one exploration license granted in August 2017 covering 14,397 hectares of land located 800km southwest of Ulaanbaatar. The property is located in between the Bayan Khundii gold discovery and Altan Nar epithermal gold deposits which were explored by Erdene Resource Development Corporation. The UK project is owned 80% by STGO and 20% by the provincial government of Bayankhongor in a first of its kind agreement for the region.

Exhibit 10: Uudam Khundii Project

Source: Company Reports

In the second half of 2018, the Company begun initial exploration on the property including geological mapping, geological sampling, geophysical surveys, and trenching.

As of June 30, 2019, the Company has completed a total of 99 drill holes for 16,157.5 meters, 2400.8-line kilometer ground magnetic survey and a 90.8-line kilometer IP survey. Exploration results for the project have been above their initial expectations and have further underscored the high-grade potential of the ATO project. In late 2018, the Company made the decision to suspend exploration in order to conserve cash until production at the ATO project begins. Once production at ATO commences, Steppe is committed to continuing exploration at the UK project in order to grow their resources.

INDUSTRY OVERVIEW

Macro-economic trends have favored both gold and silver thus far in 2019 with gold and silver appreciating 14.3% and 10.3%, respectively year to date. Many individuals and institutions purchase gold and silver in order to hedge against inflation as well as declines and volatility in the U.S. stock market. While in the short term these commodities are not effective hedges, there are studies that confirm gold does provide an effective hedge to inflation over the long term. Moreover, gold and silver have also provided an effective hedge to European and U.S. stocks during extreme volatility and crises. According to Hillier et al gold, platinum, and silver all have some hedging potential, particularly during times of abnormal volatility. In addition to the financial implications of owning gold and silver, both are used in items such as coins and jewelry, which provides some store of value.

Exhibit 11: Gold Day Close Price Trailing 3 Years

Exhibit 12: Silver Day Close Price Trailing 3 Years

Source: Capital IQ

In 2018, the largest gold producing countries were China (399.7 tons), Australia (312.2 tons), Russia (281.5 tons), and the United States (253.2 tons). According to Statista, global gold production has risen each year since 2008, when global production totaled 2,280 metric tons to 2018 when production totaled 3,260 metric tons. In comparison, Mongolia only produced 22.6 tons in 2018. However, Mongolia currently has a government dedicated to increasing gold production over the next few years. The current majority, Mongolian People's Party, has enacted the "Gold-2" program to support gold companies and to double annual gold production in country by 2020. According to the Economic Research Institute, gold production in Mongolia is expected to reach 25 tons by 2020.

In addition to the "Gold-2" program's aim to increase the amount of gold being produced; the program is also intended to improve the efficiencies of mining in Mongolia by providing:

- Favorable royalty and tax regimes
- Accelerated permitting procedures to start mines
- Simplified provincial regulations
- Government support
- Central Bank's financial support

Steppe has a great opportunity to benefit off the increased government support for mining in Mongolia. The Company is the first gold miner to implement the government's "Gold-2" plan giving them an advantage in getting their mine to production.

RISKS

As with any investment, there are certain risks associated with Steppe's operations as well as with the surrounding economic and regulatory environments common to the mining industry and operating in a foreign country.

- Even if Steppe Gold harvests a significant amount of resources from the ground, there is no guarantee that a profitable market will exist for those resources. Precious metals are subject to significant price movements in a short period of time.
- The Company has no history of net income, dividends, or cash flow and there can be no assurance that the Company will be profitable going forward. In the case that the Company cannot create enough revenue to sustain on-going business activities, Steppe's only source of financing will be through the sale of existing securities, high cost borrowing, or sale of its mineral properties.
- Mineral Reserves and grades are estimates only. There
 are many uncertainties in estimating mineral quantities
 of mineral reserves that may cause actual results and
 quantities to differ from those estimated. In the event
 that these resources are less bountiful than anticipated,
 the mine life and cash flow could be severely reduced.
- Steppe Gold has pledged a material amount of the gold and silver mined to Triple Flag in exchange for initial project financing. In addition, the Company has pledged a majority of its substantial assets at the ATO project for security to Triple Flag. This agreement could affect Steppe's ability to raise additional capital in the future. Lastly, if Triple Flag were to realize this security, the Company could lose interest in the ATO project.
- The Company intends to take the ATO project to the production stage, however, this will require additional permits and licenses from governmental authorities.
 The Company currently believes that they have or have applied for all the necessary licenses to carry out its exploration and production plans but may require additional licenses and permits going forward. There is no guarantee that Steppe Gold will be able to retain any additional licenses.
- Any exploration, development, or mining operations
 that the Company carries out will be subject to
 government legislation and policies. The mining
 operations of the Company could be adversely affected
 by changes or amendments to current laws and
 regulations. Additionally, changes in the current

- Mongolian government could bring about these adverse changes.
- The Company operates in Mongolia and maintains its accounts in Canadian and U.S. dollars as well as Mongolian Tughrik. Some of the Company's commitments and expenditures are denominated in U.S. dollars making the Company subject to currency fluctuations. Such fluctuations may materially affect the financial position of the company. The Company engages in limited hedging activities, however, there is no guarantee these hedging activities will be sufficient to defend against prolonged currency fluctuations in the future.

VALUATION

To help frame our valuation, we have created a DCF analysis of the open pit opportunity at ATO. Our valuation involves forecasting the net free cash flow generation from the mine over the 5 year estimated life of the project. Our cash flow projections are based on conservative assumptions supported by the Company's most recent technical report. The drivers for our model include tons milled, mineral grades of silver and gold, and recovery percentages over the life of the mine.

At a full production we have assumed the following:

- 1.2 million tons processed annually
- Gold g/t of 1.23
- Silver g/t of 9.96
- USD per ounce of gold: \$1450 USD per ounce of silver: \$17.50

Given that the company is close to production, we have applied a median discount rate of 9% to our resulting net after tax net cash flow we arrive at a range of CAD \$0.61 to \$1.85 with a mid-point at \$1.20. The chart below demonstrates sensitivity to a change in gold price from the \$1450 selected in our model.

Exhibit 13: Sensitivity Analysis

		Lon	g Term Gold	Price	
	1250	1350	1450	1550	1650
7.0%	0.76	1.03	1.31	1.58	1.85
8.0%	0.72	0.99	1.25	1.52	1.78
9.0%	0.68	0.94	1.20	1.46	1.71
10.0%	0.65	0.90	1.15	1.40	1.65
11.0%	0.61	0.85	1.10	1.34	1.59

Source: Stonegate Capital Partners

In addition to our DCF analysis we have also chosen a comparative company analysis below. For our valuations, we have applied our forecasted EBITDA for the fiscal year of 2019 of USD\$(0.3)M. We note that we expect a much higher EBITDA once Steppe Gold has a full year of mining expected in 2020.

IMPORTANT DISCLOSURES AND DISCLAIMERS

The following disclosures are related to Stonegate Capital Partners (SCP) research reports.

The information used for the creation of this report has been obtained from sources we considered to be reliable, but we can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice and SCP does not undertake to advise you of any such changes. In preparing this research report, SCP analysts obtain information from a variety of sources, including to but not limited to, the issuing Company, a variety of outside sources, public filings, the principals of SCP and outside consultants. SCP and its analyst may engage outside contractors with the preparation of this report. The information contained in this report by the SCP analyst is believed to be factual, but we can neither guarantee nor represent the completeness or accuracy of the information herewith. While SCP endeavors to update the information contained herein on a reasonable basis, there may be regulatory, compliance, or other reasons that prevent us from doing so. The opinions or information expressed are believed to be accurate as of the date of this report; no subsequent publication or distribution of this report shall mean or imply that any such opinions or information remains current at any time after the date of this report. Reproduction or redistribution of this report without the expressed written consent of SCP is prohibited. Additional information on any securities mentioned is available on request. SCP does not rate the securities covered in its research. SCP does not have, nor has previously had, a rating for any securities of the Company. SCP does not have a price target for any securities of the Company.

Recipients of this report who are not market professionals or institutional investors should seek the advice of their independent financial advisor prior to making any investment decision based on this report or for any necessary explanation of its contents. Because the objectives of individual clients may vary, this report is not to be construed as an offer or the solicitation of an offer to sell or buy the securities herein mentioned. This report is the independent work of SCP and is not to be construed as having been issued by, or in any way endorsed or guaranteed by, any issuing companies of the securities mentioned herein.

SCP does not provide, nor has it received compensation for investment banking services on the securities covered in this report. SCP does not expect to receive compensation for investment banking services on the securities covered in this report. SCP has a non-exclusive Advisory Services agreement to provide research coverage, retail and institutional awareness, and overall Investor Relations support and for which it is compensated \$2,500 per month. SCP's equity affiliate, Stonegate Capital Markets (SCM) - member FINRA/SIPC - may seek to provide investment banking services on the securities covered in this report for which it could be compensated.

SCP Analysts are restricted from holding or trading securities in the issuers which they cover. Research Analyst and/or a member of the Analyst's household do not own shares of this security. Research Analyst, employees of SCP, and/or a member of the Analyst's household do not serve as an officer, director, or advisory board member of the Company. SCP and SCM do not make a market in any security nor do they act as dealers in securities.

SCP Analysts are paid in part based on the overall profitability of SCP and SCM. Such profitability is derived from a variety of sources and includes payments received from issuers of securities covered by SCP for services described above. No part of Analyst compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in any report or article. This security is eligible for sale in one or more states. This security may be subject to the Securities and Exchange Commission's Penny Stock Rules, which may set forth sales practice requirements for certain low-priced securities.
