## Notes

\*Changed due to screen assay result.

\*\*Au (Eq g/t) and Zn (Eq %) represent the in-situ metal content expressed as Au and Zn equivalents.

\*\*\*Equivalents are not provided when the underlying Au and/or Zn metal content is below 15% of the intersect value.

Preliminary analysis indicates that no metal is dominant; however, Au and Zn are the largest contributors to the Estrades resource.

Equivalencies are calculated using the following metal prices (US\$) and exchange rate (US\$/C\$) provided by RPA:

Au \$1,450/oz, Ag \$21.00/oz, Zn \$1.15/lb, Cu \$3.50/lb, Pb \$1.00/lb, US\$0.80/C\$1.00.

MSS = massive sulphide, SMS = semi-massive sulphide DSS = disseminated and stringer sulphides.

Holes were not drilled in sequential numerical order. If true width (TW) is not specified, the orientation of the zone is unknown at this time.

Holes GWM-17E-08W1 and GWM-17E-08W5 did not intersect significant assays at the target due to structural complexity.

Holes GWM-18E-23, 23A, 28, 28A, 28B, 30, and GWM-17E-08W2-4 were stopped due to excessive deviation;

Hole GWM-17E-32 did not reach the target (will be extended). Holes GWM-17E-20, 22 and 23 have not yet been drilled.

Holes GWM-17E-18, 21, 29, 45, 46, parts of 28C and Newiska holes are awaiting assays.
