330000

DON LAKE - 524 ha

- six SMDI occurrences
- historic DDH No. 23: 10.7% U₃O₈ over 0.3m
- historic DDH No. 6: 2.14 % U₃O₈ over 0.67m
- "A" Zone mineralization continuous over ~ 213m

DIANNE LAKE

SMITTY - 882 ha

- two SMDI occurrences
- past producing Smitty Mine was the first privately owned uranium producer in Canada with mineralized material shipped to the nearby Eldorado mill

Uranium City

BLACK BAY - 1114 ha

- Six SMDI occurrences
- past producing Black Bay Uranium Mine
- grab samples from historic drill core from Bluegrass U Zone returned 16.74% U₃O₈ and 9.64 U₃O₈ at a depth of 12.8m

GULCH - 1996 ha

- four SMDI occurrences
- past producing Gulch Uranium Mine
- uranium mineralization associated with regional Black Bay structure

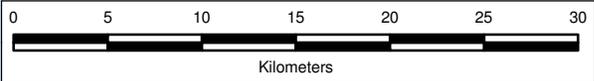

LORADO - 643 ha

- three SMDI occurrences
- past producing Lorado Mine
- structurally controlled uranium mineralization associated with graphite and pyrite

BEAVER RIVER - 1454 ha

- four SMDI occurrences
- grab samples from VIC U-Cu-Ni occurrence returned up to 27.62% U₃O₈, 36.30% U₃O₈ and 29.70% U₃O₈
- chip samples from VIC South occurrence returned U₃O₈ values of 29.89% over 29.3 cm, 18.09% over 15.2 cm and 3.09% over 60.9 cm
- mineralized zone approximately 1097 m in length

- Eagle Plains / Xcite
- Eagle Plains Project - Other
- Other Mineral Dispositions
- Athabasca Basin Margin
- Road
- Transmission Line
- Active or Depleted Uranium Mine
